

Visitor Management Software

Product Description

Why implement vIDix IDvisitor?

In most organizations today, visitors just scribble a name in a paper guest book. These guest books have been around forever. They are cheap and easy to use, but the data collected is usually incomplete, often difficult to read, and impossible to analyze. Perhaps more importantly, confidential information about who has recently visited your facility is out in the open and readily available to anyone who wants to flip through the book's pages.

What is vIDix IDvisitor?

IDvisitor is an electronic visitor management program. With IDvisitor, visitors electronically scan their ID (business card or driver's license), and all relevant information about them is captured in a secure database file, including their photo (optional), the name of the person being visited, the reason for the visit, and the time of the meeting. In just seconds, the person is professionally checked in and a high quality visitor badge is automatically printed.

Over the last several years, hundreds of organizations (both large and small, public and private) have discovered the many benefits of replacing their outdated paper log with a cost effective visitor management system.

To expand your security plan beyond visitor management, integrate your IDvisitor system with the functionality provided by the IDaxcess and IDimage modules.

BENEFITS of vIDix IDvisitor

- Enhancing the organization's image
- Securing the workplace more robustly
- Streamlining the visitor check-in process
- Accurately capture detailed visitor information
- Being able to easily perform analysis and reporting
