

Access Control Software

Product Description

Why implement vIDix IDaxxess?

The need to secure the workplace has never been greater. Your organization is exposed to many different people each day, some with intentions contrary to the interests of your organization. Do you know who and when these people are entering your building? Are they authorized to be there? Controlling access is your primary line of defense in establishing a solid facility security plan.

What is vIDix IDaxxess?

IDaxxess is a comprehensive Windows based application for controlling who has access to various areas of your facility. Eliminate the hassle of changing locks and keys when you experience staffing changes or someone has lost their keys. Just deactivate the badge and you are done. IDaxxess will record any attempts made to continue using the deactivated badge/PIN.

With the task-oriented user interface you will quickly become proficient at adding users, assigning schedules, and granting access privileges. IDaxxess lets you select individual doors or groups of doors when granting access – allowing an unlimited number of access profiles. This flexibility enables you to limit who has access to restricted areas (e.g. tool crib, computer room, accounting area, inventory, electrical closet, medical records, etc.)

The IDaxxess software will enforce access privileges and help you achieve a safer, more secure workplace. To expand your security plan beyond access control, integrate your IDaxxess system with the functionality provided by the IDimage and IDvisitor modules.

BENEFITS of vIDix IDaxxess

INCREASE FACILITY SECURITY

- Prevent unauthorized entry
- Audit door access
- Schedule times of entry
- Lock door during holidays
- Quickly disable lost or stolen badges
- Eliminate need to change locks and keys resulting from staffing changes
