

# Photo Identification Software

## Product Description

### Why Implement vIDix IDimage?

Your organization is exposed to many different faces every day. We don't think twice about current employees and invited guests, but what about those unfamiliar faces? How do you determine who they are and why are they here? How do you differentiate between people that belong and those who do not? Aside from the locks on your doors, photo identification badges are your first line of defense in establishing a solid facility security plan.

With a vIDix IDimage photo identification system you will always know who belongs and who doesn't. Employees wearing a photo ID badge are clearly identifiable, and can go beyond simple identification. They can be used for electronic building access, to collect data for time and attendance systems, and for transactions at a company store or cafeteria.

### What is vIDix IDimage?

vIDix IDimage is a software package that allows you to produce low cost photo identification badges. These badges make it easy to identify every employee as they enter your facility and move throughout your building.

Producing a high quality photo identification badge is easy. Connect a digital or CCD camera to a PC, snap a picture, and vIDix IDimage software does the rest. The images automatically appear on the screen, so you can preview and approve photos BEFORE printing them. Then just enter the ID information into the system and in seconds your badge is complete.

To expand your security plan beyond photo identification, integrate your IDimage system with the functionality provided by the IDaxcess and IDvisitor modules.

### BENEFITS of vIDix IDimage:

- Immediate recognition of unauthorized people
- Enhance the organization's image
- Easily perform analysis and reporting
- Provides for multiple applications including time and attendance and access control
- Identify employees by department with variable badge graphics
- Replace lost or damaged badges quickly
