

The vIDix Suite is a comprehensive, totally integrated suite of products designed to help you in securing your workplace. This suite of products includes Photo Identification (ID image), Access Control (ID axcess), and Visitor Management (ID visitor) systems. The vIDix suite is designed to help you manage who has access to your facility, and give you the ability to differentiate between people that belong and those who do not. Aside from the locks on your doors, the functionality provided by the vIDix suite is your first line of defense in establishing a solid facility security plan.

vIDix ID axcess

The need to secure the workplace has never been greater. Your organization encounters many different people each day, some with intentions contrary to the interests of your organization. Do you know who and when these people are entering your building? Controlling access is your primary line of defense in establishing a solid facility security plan.

ID axcess is a comprehensive Windows based application for controlling who has access to various areas of your facility. With the task-oriented user interface you will quickly become proficient at adding users, assigning schedules, and granting access privileges. ID axcess lets you select individual doors or groups of doors when granting access. This flexibility enables you to limit who has access to restricted areas (e.g. computer room, accounting area, inventory, etc.)

The feature rich ID axcess software will enforce access privileges and help you to achieve a safer, more secure workplace.

Paper guest books have been around forever. They are cheap and easy to use, but the data collected is usually incomplete, often difficult to read, and impossible to analyze. With guest books, confidential information about who has recently visited your facility is out in the open and readily available to anyone who wants to flip through the book's pages. More importantly, a visitor ID badge allows you to differentiate between invited visitors and unauthorized strangers.

ID visitor is an electronic visitor management program. With ID visitor, visitors electronically scan their ID (business card or driver's license), and all relevant information about them is captured in a secure database file, including their photo (optional), the name of the person being visited, the reason for the visit, and the time of the meeting. In thirty seconds or less, the person is professionally checked in and a high quality visitor badge is automatically printed.

vIDix ID image

Your organization is exposed to many different faces every day. We don't think twice about current employees and invited guests, but what about those unfamiliar faces? How do you differentiate between people that belong and those who do not? Aside from the locks on your doors, photo identification badges are your first line of defense in establishing a solid facility security plan.

Producing a high quality photo identification badge is easy with ID image. Connect a digital or CCD camera to a PC, snap a picture, and ID image software does the rest. The images automatically appear on the screen, so you can preview and approve photos BEFORE printing them. Then just enter the ID information into the system and in seconds your badge is complete.
